CreateASkate.org Student Petition

Students make their own skateboard, but learn so much more! middle and high-school aged students can create their own personal skateboard deck using an education based curriculum provided through the CreateAskate.org program. The non-profit (501c3) CreateAskate.org programs were developed as a 5 hour art class (no power tools needed) or a 10 hour wood-shop class (band-saw and belt sander are only power tools needed). The entire curriculum is easily adapted to a teacher's individual schedule and ability (teachers do not need to be accomplished skateboarders, artists or woodworkers themselves!).

We, the undersigned, would like the opportunity to add the CreateAskate.org programs into our school's curriculum. In order to bring this program to _____ (your school), we are willing to raise the $15 per student needed for the curriculum & supplies. We will form a committee, develop a game plan, assign responsibility and execute our plans in order to raise the necessary funds. We the student body stand behind this program and commit ourselves to an exciting way of using applied Math, Science, and Artistry.
